TITLE: A device for checking the qualitative indices of a dynamic link. Class 21, No. 179817 [announced by Leningrad Electrical Engineering Institute im. V. I. Ul'yanov (Lenin) (Leningradskiy elektrotekhnicheskiy institut)]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 6, 1966, 41-42

TOPIC TAGS: computer circuit, flip flop circuit

ABSTRACT: This Author's Certificate introduces: 1. A device for checking the qualitative indices of a dynamic link during a step reaction. The unit contains a number of identical flip-flops, shaping circuits, switches, delay circuits and counters. The rise time of the transient at the output of the link is compared with the required value by connecting two structurally identical parallel channels at the link output. Each of these channels contains a series-connected asymmetric flip-flop with a switch connected to a delay circuit based on a driven multivibrator and a clamping circuit. 2. A modification of this device in which simultaneous evaluation of maximum overcontrol, oscillation index, control time and control error is simplified by connecting four structurally identical channels to the link output with an asymmetric flip-flop

and clamping circuit connected in series in each of the channels. Switches are included in the asymmetric flip-flop circuits in the channels for evaluating control time and control error. These switches are connected to a second delay circuit based on a driven multivibrator. A counter is connected in the channel for evaluating the oscillation index between the asymmetric and symmetric flip-flop of the clamper.

TITLE: Central-dispatcher model of automatized system for the control of ship traffic operation and block diagram of a dispatcher digital computer

SOURCE: Ref. zh. Avtomat. telnekh. i vychisl. tekhn., Abs. 10A650

REF SOURCE: Tr. Tsentr. n.-i. in-ta morsk. flota, vyp. 59, 1964, 85-96

TOPIC TAGS: automatic control design, water traffic, harbor facility

ABSTRACT: The seagoing freight processes which must be controlled are complicated probability processes. A model of the control system is presented in the form of two interacting subsystems, one for planning and regulation of operations, and the other for control, accounting, and analysis. Planning solves the problem of establishing the freight volume and the distribution of freight flow either between different harbors, or within the confines of a single harbor, and other problems whose solution yields the optimum transportation plan, the optimum fleet operation, and optimum loading at the ports. As a result of various disturbing factors, the realization of the optimal plan calls for solving the problem of optimal control of fleet operation and of the loading at the ports; to solve this problem it is proposed to use statistical methods and a purposeful analysis of trial variants. The subsystem involving control, accounting, and analysis should be subordinated not only to control purposes, but also to problems of operative control. The authors describe the

Pharmacology

General Pharmacology. The drug is a potent inhibitor of the enzyme acetylcholinesterase (AChE) and is used in the treatment of myasthenia gravis.

Structure. The chemical structure of the drug is shown below. It is a diester of a pyridine ring and a carbamate group.

Pharmacokinetics. The drug is rapidly absorbed from the gastrointestinal tract and is metabolized in the liver to inactive metabolites.

GASMET, Ana, Pharmacology. The drug is a potent inhibitor of the enzyme acetylcholinesterase (AChE) and is used in the treatment of myasthenia gravis.

"A Biochemical Quantum Model for Genetic Information."

Bucharest, Microbiologia, Parazitologia, Epidemiologia, Vol 11, No 3, May-Jun 66, pp 231-240.

Abstract [Authors' English summary modified]: The authors present a model for the biosynthesis of proteins in terms of quantum mechanics, using Rosen's studies on the applicability of the quantum theory of relations to the explanation of genetic phenomena. In the proposed model definite quantum states are attributed to the nucleic acid molecules, which are "observed" by enzyme systems that then translate them and apply the corresponding information to the respective states. The suggested mechanism results in a number of original hypotheses relating to the biosynthesis of t RNA and the control mechanism of protein biosynthesis and avoids several contradictions inherent in the classical protein synthesis explanations.

TITLE: Some problems of increasing the signal capacity and signal density in rotating-magnet disk memories 16C

SOURCE: Meres es automatika, no. 2, 1966, 39-46

TOPIC TAGS: computer memory, magnetic recording

ABSTRACT: The following subjects were discussed: increasing the specific signal quantity in disk storage units per magnetic head; the recording process; the readout process; increasing the signal density; magnitude of the signal produced in the readout; and some problems involved in increasing the signal density in radial direction. It was concluded that by implementing the considerations presented it is possible to increase both signal capacity and signal density. Orig. art. has: 12 figures. [JPRS: 35,325]

1212. THE PROBLEM OF RECURRENCES IN TUBERCULOUS MENINGITIS -
Contribuți la problema recăderilor în meningita tuberculoasă - Gaspar I.,
Gaspar M. and Nastase R. Sanat. Tbc, Birnova-Reg., Iași - REV.
MED.-CHIR. IAȘI 1958, 62/3 (499-504)

Among 314 cases treated in the course of 5 yr., 31 recurrences (9.87%) were observed, men and women accounting for 64.5% and 35.5%, respectively. Most subjects affected (57.84%) were between the ages of 20 and 30 yr. Pregnancy was found to favour recurrence in 22.58% of the cases. The majority of the patients came from rural districts. Recurrences also predominated among the patients who had left hospital in the course of the first 6 months of treatment (incidence of recurrences: 68.38%). The incidence was 3.22% among those in whom treatment was carried out for from 6 to 12 months. The role played by meningeal blocking was small (9.68% of the cases); the role of intraspinal treatment has not been demonstrated. The treatment for cases with recurrences consisted in the association of antibiotics with isoniazid; the spinal route was employed in 30.76% (patients admitted in a subcomatose condition). In 1/5 of the cases, PAS was administered as well, either orally or in perfusions. The duration of treatment varied according to the severity of the case, amounting to 3 to 6 months in 43.62% of the cases, more than 6 months in 46.11%, and more than 12 months in 11.53%. Results obtained: much improved, 12.90%; improved, 64.20%; unchanged, 22.90%. The mortality was 19.35%.

/GASPAR, Julius. Eine neue Definition der Determinanten. 1 - F/W

Math. Debrecen 3 (1954); 257-260 (1955).

For matrices with elements in a commutative ring of characteristic zero and without zero divisors, it is shown that a non-constant function φ on square matrices to elements of the ring is the determinant if it satisfies: $\varphi(AB) = \varphi(A)\varphi(B)$, $\varphi(aA) = a^n\varphi(A)$ and $\varphi(A+B) = \sum \varphi(C)$, where the summation is over the 2^n matrices obtained by choosing for each row either the corresponding row of A or of B .

GÁSPÁR, JULIUS

✓ Gáspár, Julius. Eine axiomatische Theorie der kubischen Determinanten. Publ. Math. Debrecen 4 (1956), 126-130.

The author defines a cubic determinant which extends in a natural way the definition for the usual two-dimensional determinant — this was previously done by L. H. Rice [J. Math. Phys. 9 (1930), 47-71]. He shows that if $\varphi(A)$ denotes the determinant of the three-dimensional matrix A , then (a) $\varphi(A+B)$ is a sum of determinants of all matrices each of whose "planes" is a corresponding plane of A or B ; (b) multiplying a matrix A by a two-dimensional matrix M multiplies $\varphi(A)$ by the determinant of M ; (c) if A is the identity matrix, then $\varphi(A)=1$.

The influence of various manures on soil. II. Lajos Kreybig, László Gáspár, Márta Végh, Sándor Schonfeld, István Percel, and Gyula Latorczai (Ministry Local Inds., Budapest). *Agrokémia és Talajtan* 3, 67-74 (1954) (French summary).—Expts. begun in 1950 (cf. Kreybig, *Agrokémiai Kihatók és Eredmények* (1950)) with brown prairie soil were continued under anaerobic conditions. This was achieved by vigorously stamping the soil in the culture vessels whenever watering, to exclude air. While air made the soils acid, anaerobic conditions caused mineralization of the org. substances and led to a pH shift toward alkali. The org. substance of the soils decreased by about 1/3. This was considerably accelerated by the addn. of synthetic fertilizers. Both active and total humus content decreased, and some of the active humus became inactivated. The N content decreased in general, probably by denitrification. The lower, more anaerobic soil layers had a N loss approx. 3 times as high as the higher, better-aired layers. The same was true of the org.-content distribution, leading to an over-all lowering of the C/N ratio. Treatment, start analysis, end analysis, and other data on the 20 soil samples are tabulated.

"Ureaform"

Orig Pub : Magyar tud. akad. agrartud. oszt. kozl., 1957, 13,
No 1-2, 113-128

Abstract : Ureaform was prepared by the following method; 3 gram-
molecules of crystalline carbamide was dissolved in 1
liter of water, the reaction of which was preliminarily
brought up to a pH of 3.6 at a temperature of 25 degrees
with citric acid and sodium diphosphate. The solution

Abs Jour : Ref Zhur Biol., No 1, 1959, 1375

was mixed with 37% formaldehyde so that there was 1
molecule of formaldehyde to 1.625 gram-molecules of
carbamide. The solution was adjusted to a pH of 3.6
with a buffer solution. After twenty-four hours the
white precipitate was filtered, washed with water,
and dessicated. Field experiments were conducted on
liam soils of a humus-carbonate type. The test plant
was corn for green fodder. It was found that the de-
composition of ureaform was negligible, the action of
nitrogen low, and the harvest was not increased. The
quality of the green fodder was raised. An increased
harvest was observed on test fields where ureaform was
applied in combination with ammonium fertilizer. --
